

# Reptiles and Amphibians

## What am I?

Using the picture above, mark **R** for REPTILE or **A** for AMPHIBIAN

You can't get warts from a frog or toad.

Some of us lay hard shells,  
others give birth to live young  
We shed our skin  
and have a forked tongue

\_\_\_\_\_

I like to swim,  
enemies hate my shell  
I can live to be very old,  
and I'm covered with scales

\_\_\_\_\_

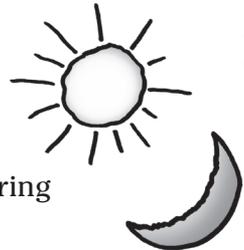

Instead of scales,  
I have smooth skin  
I hop on land  
and like to swim

\_\_\_\_\_

## Hmmm...You're Getting Warmer

Reptiles and amphibians are cold-blooded (ectotherm). They can't control how hot or cold their body gets. What makes them warmer during the day and get colder at night?
