Georgia Department of Natural Resources Incident Action Plan

Incident Name	Georgia Chronic Wasting Disease (CWD)
Operational Period #	8
Op Period Dates	3/16/2025 - 3/22/2025
Distributed To	Georgia Department of Natural Resources

Incident Summary Statement

On January 15, 2025, the Georgia Department of Natural Resources (DNR) was notified of an initial reactor screening test for a Chronic Wasting Disease (CWD) sample in a hunter-killed free-ranging white-tailed deer harvested on the Berrien-Lanier county line in South-Central Georgia. The sample was then sent to the National Veterinary Services Laboratory (NVSL) for confirmation. DNR received confirmation of positive status on January 22, 2025. On January 23, DNR interviewed the hunter and confirmed the harvest location, and subsequently issued a press release confirming the first case of CWD in Georgia. On January 24, DNR held a press release to answer questions and give further details on the next steps that will be taken. A two-county CWD Management Area (CMA) was established around the positive sample location, as well as a one-mile intensive sampling zone around the positive sample location. Within the one-mile zone, landowners and field staff are cooperating to collect additional biological samples to assess prevalence. Additionally, field operations staff are collecting samples from processors, taxidermists, and road-killed deer. 8 samples from the CMA were sent on 1/31 and negative results received on 2/3. 4 samples from the CMA were sent the lab on 2/5 and negative results were received on 2/6. On 1/31 samples (24) from outside the CMA submitted to the lab were mistakenly prioritized. On 2/28 a total of 6 samples from the CMA were submitted to the lab, all were negative. A total of 23 samples have been collected and tested negative within the CMA, 12 of which inside a 1-mile radius. As of 3/14 over 40 potential sampling locations have been indentified.

Operational Period Objectives

Incident Name Georgia Chronic Wasting Disease (CWD)

Operational Period 8

Operational Period Dates 3/16/2025 - 3/22/2025

CWD Management Zone Map

Operational Period Objectives

Incident Name Georgia Chronic Wasting Disease (CWD)

Operational Period 8

Operational Period Dates 3/16/2025 - 3/22/2025

Objective 1: Maintain frequent and excellent communication regarding CWD status and ongoing response efforts.

Objective 2: Identify and partner with landowners/hunting clubs to collect 20-30 CWD tissue samples within a 1-mile radius of the CWD positive site.

Actions:

Identify landowners within a 1-mile radius of confirmed CWD-positive sites.

Prioritize contacting landowners with more than 20 acres of land to educate them about CWD and biological sampling opportunities.

Discuss with landowners the benefits and process of cooperating with biological sampling efforts, and gauge their interest in participation.

Facilitate the collection of samples through these partners by coordinating with hunters for late-season submissions.

Work with impacted area stakeholders to continue cluster sampling where the postive deer was killed.

Ensure that all landowners who agree to participate in sampling sign the landowner authorization form to allow for biological sampling on their property.

Objective 3: Contact Taxidermists and Deer Processors in the CWD Management Area and collect available CWD tissue samples. Completed 1/24/2025

Objective 4: Identify and contact crop depredation permit holders within the CWD Management Area and partner to collect CWD tissue samples.

Actions:

This objective aims to increase cooperation from landowners and local partners, ensuring comprehensive surveillance and data collection for CWD monitoring.

Objective 5: Establish and implement protocol to collect tissue samples from deer killed by vehicles in the CWD Managment Area.

Objective 6: Develop budget impact documents for CWD response efforts.

Completed 2/15/25

Objective 7: Identify and establish deer disposal recommendations in the CWD Management Area and statewide.

Actions:

Research and identify local disposal facilities or approved methods for the safe and responsible disposal of deer carcasses in the impacted area.

Coordinate with local waste management services and landfills to determine available options for deer carcass disposal.

Explore alternative disposal options, such as incineration, in collaboration with state or federal agencies, if applicable.

Assess the logistics and costs of transporting deer carcasses to disposal sites, and determine the most efficient and environmentally safe methods.

Establish protocols for the proper handling and disposal of deer carcasses to prevent the spread of CWD, including any necessary training or guidelines for staff and partners.

Communicate the identified disposal options to landowners, hunters, and local stakeholders, ensuring they are informed about proper disposal procedures.

Monitor and evaluate the effectiveness of disposal methods throughout the impacted area, making adjustments as needed to ensure compliance and safety.

This objective ensures that proper disposal methods are in place to reduce the risk of spreading CWD and to comply with local regulations and best practices.

Objective 8: Expand CWD testing capacity at the UGA School of Veterinary Medicine (contractor).

Meeting with lab Director scheduled 2/26/2025. Completed

Objective 9: Expand CWD monitoring through environmental surveillance.

Meet with University of Minnessota and Priogen to discuss environmental surveillance with RT-QuIC technology. Completed 2/13/2025 and 2/18/2025

Order sampling supplies from Priogen.

Meet with GDA to discuss sampling in deer facility. Completed 2/21/2025

Conduct environmental surveillance on deer facilities inside CMA.

Objective 10: Assess human dimensions of risk factors in the CMA and identify mitigation recommendations.

Coordinate with UGA to develop a research proposal to assess CWD risk factors before and after educational campaign. *Completed 2/20/2025*

Develop and implement educational campaign on CWD risk factors and management.

Incident Accomplishments

Field Response

The Operations team has been contacting landowners within a 1-mile radius of the positive sample site to inform them of the CWD positive sample, and to work with them to gain additional samples to determine CWD prevalence via landowner permit. Field staff have also collected samples from processor and taxidermists, road-killed deer, and sick deer within the CMA.

Table 1. Summary of CWD related field response by DNR Staff since start of incident

Contact Type	Totals
Deer Depredation Permit Holders Contacted	2
Deer Processors Contacted	6
Taxidermists Contacted	4
Landowner Permits Issued	8
Total Samples Collected in CMA	23
Samples collected in 1-mile radius	12

Table 5. Summary of samples collected by sample type and location within the CMA.

	Samples collected in CMA						
Harvest Date	Sample Number	County	Inside 1 mile radius	Sex	Age	Sample Type (roadkill, hunter harvest, processor, etc.)	Results
